

mw-multiconfiguration

Friday, 23 July 2021 4:06 PM

Use the **working application in mwaz400@outlook.com Azure DevOps (DDLWebApp)**

Notice that **colour** is in **appsettings.json** file

It can be set as part of a **Azure DevOps release pipeline** as follows: **(each stage could have a different value! QA=yellow, Prod=silver)**

The screenshot shows the 'ReleaseToAustralia' pipeline configuration in Azure DevOps. The 'Tasks' tab is selected, showing a task named 'Deploy Azure App Service'. A red arrow labeled '1' points to the task. A red arrow labeled '2' points to the 'App settings' section under 'Application and Configuration Settings'. A red arrow labeled '3' points to the 'colour' setting, which is currently set to 'aqua'.
